

QUALITY MANAGEMENT

LABORATORY QUALITY MANAGEMENT SYSTEM

Every water quality testing laboratory needs a solid quality management system to assure accuracy and reliability throughout the path of workflow, and as a fundamental basis for a possible ISO 17025 accreditation. In many cases, suppliers and regulatory authorities will not accept test results from a laboratory that cannot show a good quality management system.

The implementation of a good quality management system offers both, laboratory and business advantages such as:

- Extension of the potential customer circle
- Better reputation and a better image of the laboratory at national and international level
- Continuous improvement of data quality and effectiveness of the laboratory
- Creation of a good foundation for ISO 17025 accreditation.
