

WATER QUALITY SURVEYS

WATER QUALITY SURVEYS

To be able to carry out a representative baseline survey on the quality of drinking water becomes more and more important in many developing countries.

However, to introduce that capacity and to master all the steps, methodologies, documents, tools etc. necessary is a challenge that can require professional support at the beginning.

CONSULTING

We consult water testing laboratories in developing countries in building up their capacity to perform professional water quality baseline surveys. We cover e.g.:

- sampling methods
- data management
- choice of equipment
- generation of a survey questionnaires
- choice of parameters to be analyzed
- definition of sampling points
- generation of a survey calendar
- definition and acquisition of required resources
