

## Technical Data Sheet

# Household Water Test Kit - presence or absence of faecal bacteria

## Description

The Household Water Test Kit is an educational presence/absence test kit, protected by patent office, which detects bacteria of fecal origin in drinking water. The Kit has numerous advantages in its use in rural areas and with respect to the objective of education and sustainable behavior change.

It is used in particular in the context of community and household awareness raising operations: possible contamination between an improved water source, serving good quality water, and the point of consumption at household level can be discussed.

The kit follows a simple multi-barrier approach proposed by the World Health Organization for households that are not directly connected to a water supply network: (i) improved source; (ii) household treatment; (iii) safe storage after treatment.

## Specifications

- Art. no.: 113858 (kit language: English), 118183 (kit language: French), 118185 (kit language: Spanish)
- Form: Recycled paper box
- Dimensions: 173 x 109 x 100 mm
- Weight: 280 g

### Content of a kit

- LETZTEST tubes presence / absence: 15 pcs
- Drinking water quality education booklet illustrating the links between faecal contamination of drinking water and diarrhoeal diseases
- Illustrated test instructions
- Table of results
- Pen
- Stickers

## Production site

### LETZTEST

Gottfried-Hagen-Str. 60-62  
51105 Cologne (Germany)

LETZTEST is a company that attaches great importance to the quality of its products. Both the intermediate production stages and the final products are checked according to specified release criteria.
